International application No. PCT/GB99/02716

I. Basis of the report

1. This report has been drawn on the basis of (substitute sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to the report since they do not contain amendments.): Description, pages: as originally filed 1-44 Claims, No.: as originally filed 1-35 Drawings, sheets: as originally filed 1/32-32/32 2. The amendments have resulted in the cancellation of: ☐ the description, pages: Nos.: ☐ the claims, ☐ the drawings, sheets: 3.

This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)):

4. Additional observations, if necessary:

see separate sheet

International application No. PCT/GB99/02716

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)

Yes:

Claims 12 - 21, 28, 29, 35

No:

Claims 1 - 11, 22 - 27, 30 - 34

Inventive step (IS)

Yes: No:

Claims 14

Claims 12, 13, 15 - 21, 28, 29, 35

Industrial applicability (IA)

Yes:

Claims 1 - 35

No: Claims

2. Citations and explanations

see separate sheet

VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

INTERNATIONAL PRELIMINARY

International application No. PCT/GB99/02716

EXAMINATION REPORT - SEPARATE SHEET

Re Item I

Basis of the opinion

This written opinion is also based on the Sequence Listing (pages 1-64) as originally filed.

Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The following documents (D) are referred to in this communication; the numbering is following the order of the International Search Report:

- D1 WO-A-9524486 (Zeneca)
- D2 WO-A-9517514 (Zeneca)
- D3 WO-A-9739134 (Scottish Crop Research Institute)
- D4 Beck von Bodman et al., 1995. Bio/Technology 13:587-591.
- D5 US-5162601 (The Upjohn Company)

Article 33(2) PCT (Novelty) 1.

- 1.1 Present claim 1 is directed to a method of improving expression levels of one or more proteins in a plant by expressing the proteins form one DNA construct. The polyprotein contains a linker propeptide that is post-translationally processed to release the component proteins.
- 1.2 Document D1 (page 10, third paragraph) discloses a method for the expression of polyproteins in transgenic plants where the component peptides are separated by cleavage sites and where the polyprotein is post-translationally processed into the component proteins. The protein components may be identical (page 14, second paragraph), thus increasing and improving the expression of said protein compared to the expression of a single protein. The polyprotein consists of antimicrobial proteins from Impatiens balsamina or Aralia chinensis

International application No. PCT/GB99/02716

EXAMINATION REPORT - SEPARATE SHEET

(page 3, paragraphs 3-5).

1.3 Thus, D1 anticipates the subject-matter of present claim 1. The same holds true for present dependent claims 2 - 11 as well as for claims 22 - 26 addressing the use of propeptides as linkers in polyproteins and claims 27 and 30 - 34 addressing the corresponding DNA constructs and the linker sequences. These claims do not meet the requirements of Article 33(2) PCT.

Article 33(3) PCT (Inventive step) 2.

2.1 Present claims 12, 13 and 14 - 21 may be novel but they are not based on an inventive concept. It does not involve an inventive step to vary the linker sequences of the polyprotein or to employ other known antimicrobial proteins like those from Dahlia or Amaranthus. Furthermore, D1 (page 12, first paragraph) already suggested the use of viral sequences as linkers in polyproteins. Linkers with protease processing sites have already been employed in the prior art (e.g. D4 and D5) and it does also not involve an inventive step to combine known linkers with known methods.

Present claims 12 - 21 do not meet the requirements of Article 33(3) PCT. The same holds true for present claims 28, 29 and 30 addressing the corresponding DNA constructs and linker sequences.

2.2 Present claim 14 may be based on an inventive concept once the objections under Item VIII have been overcome.

Re Item VIII

Certain observations on the international application

Present claim 14 does not meet the requirements of Rule 6.3 PCT. The term 1. chimeric propeptide does not constitute a definition through a technical parameter. It is not apparent what such a propeptide may comprise and thus places an undue burden on others seeking to establish the extent of protection and therefore renders the claim as a whole unclear (Article 6 PCT).

EXAMINATION REPORT - SEPARATE SHEET

A similar objection applies to the terms Dm-AMP1 or Ac-AMP2 used in present 2. claims 12 and 28.

Documents 1 through 3 describe that the GOGAT in a bacterium belonging to Corynebacterium participates in the production of L-glutamic acid.

Documents 4 and 5 describe the GOGAT gene arrangements of Escherichia coli and yeast respectively.

Document 6 describes that if an intended gene is integrated into the chromosome of a Coryne form bacterium, a microbe useful, for example, for fermentation and production of amino acids can be bred.

Document 7 describes Brevibacterium lactofermentum which is a bacterium of Corynebacterium.

It could have been easily conceived by a person skilled in the art, that the gene arrangement of GOGAT enzyme existing in a bacterium of Corynebacterium is cloned using the portion highly homologous in gene arrangement described in documents 4 and 5, as described in documents 1 through 3.

Furthermore, it could have been easily conceived by a person skilled in the art, that the gene obtained like this is introduced into the bacterium of Corynebacterium described in document 7, using the method described in document 6, for preparing a microbe used for producing L-glutamic acid.

Moreover, the method for amplifying the manifestation of an introduced gene could have been selected, as required, from the methods well known before the present application.
